

Choose one popular website:

1. YouTube

2. Yes YouTube is responsive, Its layout automatically adjusts to different screen sizes, whether it is opened on a desktop, laptop, tablet, or smartphone. This makes the website easy to use on any device.

3. What changes on mobile?

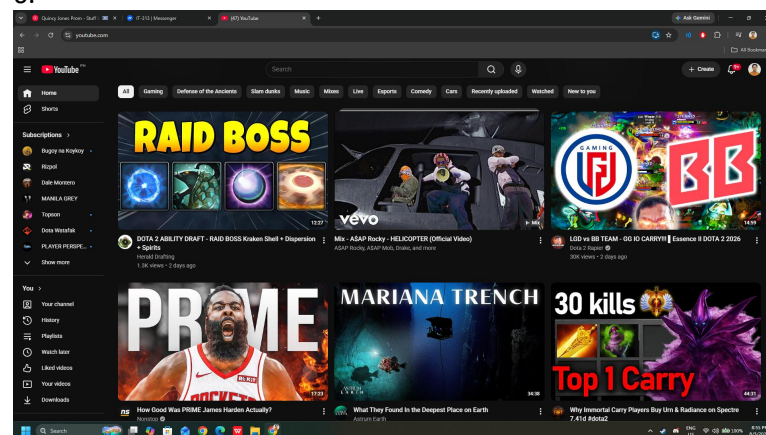

- The navigation menu is simplified.
- The sidebar is hidden and replaced with icons or a menu button.
- Videos are displayed in a single-column layout.
- Buttons and text are optimized for touchscreens.
- The bottom navigation bar appears for easier access to Home, Shorts, Subscriptions, and Library.

4. What changes on desktop?

- The sidebar is visible on the left side of the screen.
- More videos can be displayed at the same time because of the larger screen.
- The layout uses multiple columns of video thumbnails.
- Additional features and menus are easier to access.
- The video player can be viewed in a larger size.
- Navigation is optimized for mouse and keyboard use.

5. I like YouTube's design because it is simple, clean, and easy to navigate. The homepage is well-organized with video recommendations, and the icons and menus are easy to understand. The design is also responsive, so it provides a good user experience on both desktop and mobile devices.
